

A PRACTITIONER KNOWLEDGE BASE

Read *The Market*

Reverse-engineering the reasoning of professional RTM traders — the why behind every structure, every zone, every failure.

Before a single line of code is written.

This volume establishes a complete RTM knowledge base: definitions, relationships, failure conditions, and the reasoning chains that separate professionals from pattern-mechanics. Every concept is explained through auction logic and the IPDA, never through indicators. It is the foundation on which the future trading engine must be built.

DELIVERABLE PRE-ENGINE KNOWLEDGE
